This is a blog about my experience in using the voice based service Google Voice and work on the apps and tools I develop on this service. After I purchase the service I follow a simple process for setting it up and the worst part is I get the service for free, so I was always doing without, until I started creating and developing apps and tools using the Google Voice as my main phone. I've been using it as my main phone for almost 4 months and I just love it. You can use it with your Google Talk account (not GMail) to communicate with your friends and family anywhere in the world. It costs \$40 for a year but with that \$40, you get to talk, browse the web, listen to Podcasts, compose text based emails and make phone calls

Optical interferometry is an example of one approach to optical metrology. Generally, optical interferometry involves the use of two or more optical beams of differing wavelength that interact when combined or fused at a common point. The optical phase of a particular beam at that point, and thus the relative optical path length of the beam, can be related to the physical path length of a reference arm of the interferometer by noting the relative phase delay of the combined beam with respect to the combined beam. WebMonit monitors and alerts you if a web page changes. It learns as you browse and will adjust its behavior according to your preferences. WebMonit Features: - Free - Detects and notifies you when your favorite websites change - No configuration necessary - Works on all supported web browsers WebMonit Review KBackup Pro is a data back-up solution that helps you to restore and recover all your files from an image, including documents and other types of files, in case of major system crashes or hard disk failures. KBackup Pro is very easy to use and simple in its basic operations, but it also boasts a few more advanced features that can prove useful to more experienced users. KBackup Pro offers you the option to choose between several backup levels: - Local - If you choose this option, you will have to choose the folders or individual files you want to back up (depending on the desired level of protection); - Remote - In this case, the backup copy will be written directly to the server from which you are connecting; - Multidrive - This is the most advanced mode that

supports automatic backup generation for connected devices. This feature is a great way to protect your files in case you happen to lose them, especially if you are using a laptop or any other portable device. - Exclude - When you choose to exclude folders or files, these will remain unbacked-up; this is a useful option to choose if you are an online gamer and you don't want to back up your games. KBackup Pro is equipped with various actions, which are scheduled on a regular basis (daily, weekly, monthly). If you choose to schedule them in a daily basis, this means you will have to back up your files on a daily basis, which isn't a daunting task (unless you get thousands of files); on the other hand, choosing a weekly schedule requires a more advanced knowledge, since it allows you to choose the intervals of data backup. As far as the number of files or folders included in the backups, you can freely increase or decrease it, so you can choose how many files or folders you want to backup on a weekly basis. KBackup Pro is a free software, but if you need more advanced tools, you can get more flexibility and additional features if you download the Premium version for a fee. KBackup Pro offers you the choice to restore your data from a previous backup you have made.
