DXF Viewer - DGN Viewer DXF Builder - DGN Builder ObjectARX is the base class library for all other APIs, but it is also the only one that you should be using. Most of the other APIs are not made for use in stand-alone applications. This is because they are not hardware-agnostic. That is, they all operate on a single computer system. That is different than the functionality you would find in AutoCAD. The ObjectARX class library is available in two versions, ARX and ARX-A. The ARX version does not support DXF import, export or viewer functions and has no capability to send XREFs. The ARX-A version supports DXF import, export, viewer and XREFs. It is the recommended version to use in stand-alone applications. AutoCAD includes a number of command-line tools, such as autoconf, autoconf-arch, autoconf-compiler, autoconf-default, autoconf-host, autoconf-lisp, autoconf-mac, autoconf-win, autoconf-xlsm, autoconf-xlsl, configure, copy-cmd, fixprg, fixesrc, make, makedepend, makeprg, makepkg, mkdevpack, mkrefcmd, makepkg-arch, makepkg-compiler, makepkg-host, makepkg-mac, makepkg-win, makepkg-xlsm, makepkg-xlsl, mkmf, mkxlsm, mkxlsx, mkxltx, mkxltx2x, mksrc, mkwindeps, mksrc-win, mksrc-xlsm, mksrc-xlsl, objcopy, objdump, sed, strip, and yacc. The documentation for these command-line tools is included with the software. The version of ARX-A used in AutoCAD 2013 and 2014 was 17.5, and that of ARX was 17.3.
